

# Applications of Gelco gelatin in the production of coated tablets

Gelco gelatin is also widely used in the manufacture of coated tablets.

Gelatin coatings hide unpleasant tastes and odors and provide longer shelf life by protecting the medicine from air, light and moisture.

These layers can also be chemically treated to resist disintegration by acids, allowing very slow enzymatic absorption.

Gelatin also helps improve the stability of the final product by acting as a natural binder and adhesive.

Application	Bloom	Gelatin uses
Tablets	220 - 240	Form film, hide flavor. Protect assets and improve their stability. Serve as binder and adhesive.
